

ILLUSION DOWN LIGHT

NEW FOR 2024

Chemically Hardened Glass for an Ultra-Thin Profile.

Proprietary Process allows for greater range of unique design possibilities.

The Illusion Series - Down Light

The Illusion Series introduces a new level of refinement and sophistication to the Lumitec product lineup. Designed to have an ultra-thin profile with a seamless, clean look and incorporating industry-first materials and processes.

Unique in styling and highly versatile in appearance the Illusion Down Light will launch the series. A bezel-free design allows for a wafer-thin profile, with a shallower mounting depth than the current Mirage light, but still incorporating the convenient butterfly clip mounting system with no exposed fasteners. The Illusion Down Light will include a "Light to Sound" synchronization feature when paired to a compatible Poco module. Color output options will be warm white/spectrum, cool white/spectrum, and single color white and warm white output.

Much lower profile than existing down lights.

A proprietary finishing process allows for unique industry-first designs that incorporate metallic colors, along with many other styling options. This unparalleled flexibility adds a new level of customization to the down light category to meet the contemporary design style and color palette of today's boats.

Available with white and black finish as inventory items.

Examples of possible options.
