

Digital Lighting Control

Simple Powerful Cost-Effective

Lumitec's Digital Lighting Control delivers powerful, cost-effective, lighting control through a compatible MFD or connected smart device with an easy to install control module.

Poco 3 Digital Control Module

The Poco 3 Digital Control Module is compact and completely sealed. It replaces physical circuits, wires and switches, simplifying wiring schemes and saving builders time and money. When installed with Lumitec's PLI-enabled lights, the full power and functionality of the system is unleashed - delivering a level of sophisticated lighting control previously found only on high-end yachts.

Pico Expansion Modules

Pico Expansion Modules are designed to expand the power and reach of the Poco 3 Digital Lighting Control system, making it possible to control other manufacturers' luminaires and lighting accessories, which do not have sophisticated PLI technology built-in, or assign Poco virtual commands to physical switches.

Pico C4 -The C4 module provides Poco or TTP control of third-party RGB or RGBW lighting accessories. This means that everything from lighted speakers, to cup holders, to yacht letters can be controlled through the Poco system and seamlessly integrated into the vessel's overall lighting scheme. On vessels not equipped with the Poco system, the Pico C-4 provides control of color and intensity through any normal on/off switch, using Lumitec's field-proven TTP protocol.

Pico S8 - The S8 module provides the ability to assign Poco virtual switch commands to physical mechanical switches (8 max per S8 module). This means that your MFD can remain on a dedicated screen, or even be turned off, and a physical switch will activate the virtual switch command through the Poco 3 module.
